GROUP

3D & 4D Ultrasound Scanning

Windsor Medical Group are now delighted to offer advanced 3 & 4 dimensional fetal ultrasound scanning as we continue to deliver expertise and “state of the art” care in women’s health.

At your scan you will see wonderful live 3 dimensional images of your baby’s face and body and your baby moving (known as 4D scanning). It will be carried out by our highly trained and experienced radiographers in a relaxed, comfortable, friendly environment. The scan lasts approximately 30 minutes and your partner or a friend is very welcome to accompany you.

To obtain the best images of your baby we recommend attending for your scan between weeks 24 and 30 of your pregnancy. A normality scan will be carried out and if you would like to know the sex of your baby, we will inform you, if it is possible to do so.
